

FLUID SEALING INTERNATIONAL

MILITARY DEFENSE MANUFACTURING

Background:

FSI was contacted by a global military defense company to manufacture items for a AN/TPQ-53 mobile array radar that detects indirect enemy fire.

Challenge:

The global defense company needed to get the series of parts turned around in 2 months.

How We Did It:

FSI is proud to support our country's Armed Forces, and we diligently worked to deliver. We were driven to provide better safety for our military in what ever way we can and as soon as we can.

FSI was able to exceed the customers expectations by completing the machined items for the AN/TPQ-53 four weeks ahead of the original required date.
